Development & Reclamation Program

FROM: Susan Linner, ^{SC} Permit Supervisor/Reclamation Biologist

RE: Ideal Basic, Devil's Slide Cement Plant, ACT/029/011,
Morgan County, Utah

The B Team has finalized its review of the permit application for the Ideal Basic Devil's Slide Cement Plant. The applicant submitted a complete new plan, received May 19, 1987, which was the basis for the review.

The B Team has found that the submittal is complete enough to give tentative approval at this time and proceed with publication of notice. It is recommended that the C Team proceed with this step and finalization of the permit.

There are two (2) areas that still need to be addressed before the permit can be finalized.

1. The Division needs to determine the requirements for the bond, based on the proposed reclamation plan.
✓ Randy Harden will work with Frank Filas on the calculations.
2. Due to the long life and dynamic nature of the operations, it is difficult at this time to foresee exactly what measures will need to be taken upon final reclamation. Therefore it is recommended that the following stipulation be placed on the final permit.

Stipulation M-10 - JRH

The operator shall commit to providing detailed reclamation designs for the operation within the final 5-year permit term, or, within 180 days prior to commencement of reclamation operations. Designs for reclamation of the site shall include but not be limited to; drainage design and reconstruction, mass balance for earthwork and grading,

removal of impoundments, stability analysis, monitoring and other such site specific reclamation requirements that may be needed to effect reclamation of the operations.

The technical review memos are attached.
